Domed Resin Labels

Domed Resin Labels are optically clear labels that have a coating of resin applied over the surface of the label, giving the label a three dimensional appearance, and a high gloss look which is visually eye catching and adds a touch of class!

The resin coating itself is a soft, flexible resin which is UV light resistant, so it will not discolour, is resistant to scratching, and can withstand outdoor environments such as on motor vehicles and outdoor equipment. The adhesives used are permanent and durable, so the labels will stay stuck firmly on the substrate they are applied to for many years.

Our domed labels are commonly used for,

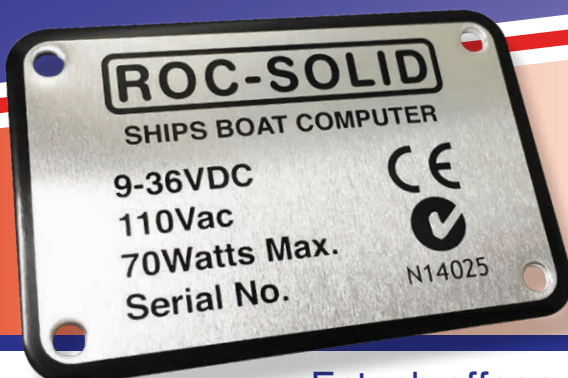

- Prominent branding of products
- Name plates and promotional applications
- Machinery and automotive badges

Aluminium Nameplates

This is perhaps the most rugged label of all, the metallic nameplate.

With unique anti-scratch technology, a variety of colours and anodizing options, we can design a name plate that suits your product both aesthetically and environmentally.

Entech offer a full design and supply service incorporating artwork and drawings. We can also assist with material selection
